We also provide χ^2 tables for various one-, two- and three-dimensional projections of the global analysis. If you use these results, please refer to both [1] and [2].

Description of the χ^2 data tables

We provide four xz-compressed files, containing the χ^2 data tables for both Normal and Inverted Ordering of our global «w/o SK-atm» and «with SK-atm» analyses. Each file is divided into 22 sections, identified by a unique tag and corresponding to a particular one-, two- or three-dimensional projection. The tags and the meaning of the data columns for each section are listed below (note that $\ell = 1$ for NO and $\ell = 2$ for IO).

N°	Section tag	1 st column	2 nd column	3 rd column	4 th column
